Contact

I have been keeping up with SD less lately, which means I am more likely to miss new models.
If you think something is missing from this list, contact me with details.

Stable Diffusion v1.5 [81761151] [a9263745]

The Stable-Diffusion-v1-5 checkpoint was initialized with the weights of the Stable-Diffusion-v1-2 checkpoint and subsequently fine-tuned on 595k steps at resolution 512x512 on "laion-aesthetics v2 5+" and 10% dropping of the text-conditioning to improve classifier-free guidance sampling.

Stable Diffusion VAE ft-mse-original

Resumed from ft-EMA and uses EMA weights and was trained for another 280k steps using a re-weighted loss, with more emphasis on MSE reconstruction (producing somewhat "smoother" outputs). To keep compatibility with existing models, only the decoder part was finetuned; the checkpoints can be used as a drop-in replacement for the existing autoencoder.
Repo & Info (with comparisons) https://huggingface.co/stabilityai/sd-vae-ft-mse-original

A VAE is not the same as the other models on this list. It is not a complete model that can be used to generate images alone, but a component to be used in tandem with other models.
If you don't know what this is or why you would want it, don't bother with it.

Stable Diffusion Inpainting v1.5 [3e16efc8]

Repo https://huggingface.co/runwayml/stable-diffusion-inpainting
Intended to be used with https://github.com/runwayml/stable-diffusion

The Stable-Diffusion-Inpainting was initialized with the weights of the Stable-Diffusion-v-1-2. First 595k steps regular training, then 440k steps of inpainting training at resolution 512x512 on “laion-aesthetics v2 5+” and 10% dropping of the text-conditioning to improve classifier-free classifier-free guidance sampling. For inpainting, the UNet has 5 additional input channels (4 for the encoded masked-image and 1 for the mask itself) whose weights were zero-initialized after restoring the non-inpainting checkpoint. During training, we generate synthetic masks and in 25% mask everything.

Cafe Unofficial Instagram TEST Model [50b987ae]

Trained on ~140k Instagram images made up of primarily Japanese accounts (mix of cosplay, model, and personal accounts)
While the model can create some realistic Instagram-esque images on its own, for full potential, it is recommended that it be merged with another model (such as berry or anything)

Trinart

trinart_characters_19.2m_stable_diffusion_v1 [d64dab7f] + VAE

A stable diffusion v1-based model trained by roughly 19.2M anime/manga style images (pre-rolled augmented images included) plus final finetuning by about 50,000 images. This model seeks for a sweet spot between artistic style versatility and anatomical quality within the given model spec of SDv1.
This is the same version 1 model that was released in AI Novelist/TrinArt service from early September through Oct 14.
The dataset is filtered to exclude NSFW or unsafe contents.

SmirkingFace

> SmirkingFace is a project that aims to finetune the Stable Diffusion model with high quality erotic content and allow it to generate a large variety of erotic content.
> In case you're uncertain which model you need, the EB 1.0 EMA model tends to perform well in many cases. EBL 1.0 has been trained for the longest, but will require code for our modified model to work (released on our github).
> Note: All our models include the updated MSE VAE released by Stability AI.

easter_e5 [da453598]

General lewd model, "Easter.ckpt"! Trained on about 180k images from gelbooru and e621.
NSFW and niche content is included. I take no responsibility for the model's outputs!
Model seems better at the front than the back.
Suggested negative prompt: "Letterbox".
The name comes from its tendency to mix rabbits and eggs.

Hentai Diffusion

Repo https://huggingface.co/Deltaadams/Hentai-Diffusion/tree/main
Supposedly will update weekly, so check the repo, it might be more current than this listing.
The pruned torrents below are with EMA weights removed.

This model was based on Waifu Diffusion 1.2, and trained on 150,000 images from R34 and gelbooru.
Focused training has been done of more obscure poses such as crouching and facing away from the viewer, along with a focus on improving hands.
Using tags from the site in prompts is recommended. Adding 1girl to the start of the prompt will help get better results.

Bare Feet / Full Body b4_t16_noadd [03e33bb4] [2bd8166c] [9012c514]

High quality labels only (the "curated" model).
Preview grid https://i.imgur.com/2sJGz3j.jpeg

> A very WIP checkpoint focused on Bare Foot (BF) Full Body (FB) nude female images - best used if you are trying for accurate photorealistic feet or female genitalia, both of which normal SD struggles with
> It is very much WIP
> Extremely specialized, and lost a lot of general purpose capability and ability to stylize.

Zack3D_Kinky-v1.ckpt [1a75d5c6]

This is a NSFW model trained from SD v1.4, great for general furry but specializes in the kinky side of art such as
Transformation, latex, tentacles, goo, ferals, bondage, and a lot more that I cant remember. Uses over 100k images all aesthetics filtered.
Prompt is raw E621 tags, so with underscores.

sd-wikiart-v2.ckpt. [8f32b8df]

> sd-wikiart-v2 is a stable diffusion model that has been fine-tuned on the wikiart dataset to generate artistic images in different style and genres.
> The current model has been fine-tuned with a learning rate of 1e-05 for 1 epoch on 81K text-image pairs from wikiart dataset. Only the attention layers of the model are fine-tuned. This is done to avoid catastrophic forgetting, the model can generate artistic images given specific prompts but still retains most of its previous knowledge.

Pachu-Diffusion [54d5d199]

This fine-tuned Stable Diffusion v1.5 model was trained for 8000 iterations on the works of Pachu M. Torres. Training was performed using ShivamShrirao/diffusers with full precision, prior-preservation loss, the train-text-encoder feature, and the new 1.5 MSE VAE from Stability AI. A total of 4120 regularization / class images were used. Regularization images were generated using the prompt "artwork style", 50 DDIM steps, and a CFG of 7.
Use the tokens `pachu artwork style` in your prompts for the effect.

Repo https://huggingface.co/ProGamerGov/Pachu-Diffusion

```

TestFurry_5.ckpt [b1f1855e]

Small model, trained with 40k dataset mixed furry and humans (~15k humans and 25k furry). No censorship, no speech bubbles, no comic strips. Gelbooru/e621 mixed tags. 5 epoch (still not finished but can do good results) NSFW!!
Tags order recommendation - type (furry if furry), character, source, author, race, gender, other description tags.
Trained on up to 225 tags, with penultimate layer (CLIP 2 in AUTO GUI)

cookie_sd_pony_run_a12 [2ce7dcf5] [67ff5385]

This is the "Cookie A12" model.
Trained on 300k Derpibooru images with score.gt:100 for 2172700 steps.

New features;

- Improved VAE
- Improved CLIP Text Encoder
- Generate images at any aspect ratio
- Generate any derpibooru artist or OC to high accuracy.
- Generate Anthro, Humanized, EqG, Dragon?, whatever exists in derpibooru.
- Generate high quality results without "magic words" (https://u.smutty.horse/mjzakocpxtf.png)
- No censored tags or data, NSFW+SFW.

Note:
Keep CLIP Skip off. The improved CLIP will break if you skip any layers.

Samples:

pony-diffusion

pony-diffusion-v2 [5bdc40aa]

> pony-diffusion is a latent text-to-image diffusion model that has been conditioned on high-quality pony and furry SFW and NSFW images through fine-tuning.
> WARNING: Compared to v1 of this model, v2 is much more capable of producing NSFW content so it's recommended to use 'safe' tag in prompt in combination with negative prompt for image features you may want to suppress. v2 model also has a slight 3d bias so negative prompts like '3d' or 'sfm' should be used to better match v1 outputs.

Repo https://huggingface.co/AstraliteHeart/pony-diffusion-v2

Dreambooth

Hiten girl_anime_8k_wallpaper_4k.ckpt [7831dea3]

Useful for merging.
Custom Dreambooth model based off of the artist Hiten. Dataset was 6 training images, and 34 regularization images. Trained for 4000 steps.
Uses the Waifu Diffusion v1.2 model as a base.
To use the model, simply insert the name 'Hiten' into your prompts. The class token used was 'girl_anime_8k_wallpaper'. Append the class token after Hiten for stronger results. EX: "1girl by Hiten girl_anime_8k_wallpaper"
Info: `https://huggingface.co/BumblingOrange/Hiten`

SHA256 | 59cb5b6f2b7b9373a602d93c802ee841c367db5166a758e8d1d32464c9db1dd5

Gawr_Gura_450img.ckpt [e7883abf]

Based on Waifu Diffusion v1.2
Custom Dreambooth model based off of the likeness of Hololive Vtuber Gawr Gura. Dataset was 450 training images, and 900 regularization images. Trained for 3000 steps.
To use the model, simply insert the name 'Gawr Gura' into your prompts.
Repo: https://huggingface.co/BumblingOrange/GuraLv400
Web

https://huggingface.co/BumblingOrange/GuraLv400/resolve/main/Gawr_Gura_450img.ckpt

Emilia_CustReg_3k.ckpt [2660cf9a]

Based on Waifu Diffusion v1.2
Custom Dreambooth model based off of the likeness of Emilia from Re:Zero. Dataset was 16 training images, and 11 regularization images. Trained for 3000 steps.
To use the model, simply insert the name 'Emilia' into your prompts. The class token used was 'white_hair_girl_violet_eyes'. Append the class token after Emilia for stronger results. EX: "A photo of Emilia white_hair_girl_violet_eyes"
Repo: https://huggingface.co/BumblingOrange/Emilia

https://huggingface.co/BumblingOrange/Emilia/resolve/main/Emilia_CustReg_3k.ckpt

Star Fox Krystal

Trained on 90 fan art images for 2500 steps on top of yiffy18. Regulation images were an even mix of about 200 low-quality generations of 4 common anthro species with a spread of gender (a new idea I hope to explain in a forthcoming guide).
This following bit of text MUST be used in your prompt, or it will do nothing!
Trigger Phrase `thatbluefoxfromstarfoxkrystal anthro`

bukkake [b4a14787]

bukkake_20_training_images_2020_max_training_steps_woman_class_word.ckpt
SD1.4 + Dreambooth

> A good prompt to test is is "portrait of bukkake woman, cute girl, sexy, beautiful girl, photograph, nikon d4, f/2.8, 70mm, topless"
> Tip: Do NOT use face restore if you are trying to do txt2img to achieve any kind of realistic cum on a realistic face. Both currently available face restore models (GPFGAN and Codeformer) completely remove or ruin cum on face. Hopefully another coomer will come up with a new face restore model that ignores liquids on faces and still fixes the underlying face

```

Raven anime.ckpt

> 'anime' model - A newer model. It is a bit undertrained for more flexibility. It can create more complicated images with greater stability, but with a stronger anime style.
> Tag & classname require more emphasis / attention than the 'Western' model. Try (RavenRoth woman:1.2). It is a bit undertrained for more flexibility - may need to use 'grey skin' in the prompt. (RavenRoth woman:1.2) with grey skin.
> Tag & classname: `RavenRoth woman`

Web

```
https://mega.nz/folder/4KlHFQaL#NBqANoiG3E7mz3apn85Q0g
```

Raven Western.ckpt

> This is an earlier Dreambooth model I created. It has a style more true to the Teen Titans cartoon and Zone art.
> I noticed how negative prompts can cause the model to shift away from a cartoon / Zone art style, so be careful with negative prompts if you find this.
> A negative prompt of: 'lowres, (bad anatomy), bad hands, text, error, missing fingers, extra digit, fewer digits, cropped, worst quality, jpeg artifacts, >signature, watermark, username, blurry, artist name' works well.
> I think the AI considers the thick line art style to be 'low quality' and for Raven to be 'deformed' or 'mutant', due to the grey skin.
> Try lower CFG Scale (closer to 5) for more flexibility. You may even want to try `[RavenRoth anime_girl]`
> Tag & classname: `RavenRoth anime_girl`

Web

```
https://mega.nz/folder/4KlHFQaL#NBqANoiG3E7mz3apn85Q0g
```

oshinobu-pruned.ckpt

> Dataset Size: 63 fanart images that resemble the anime character design (just 3 or 4 are NSFW)
> Steps: 9450 (~6 epochs)
> Base Model: Waifu Diffusion v1.3
> Trigger Phrase (Identifier + Class): `illustration of a oshinobu blonde_loli`
> Because of the training data used, generated images keep her typical round blush (most of times).
> Now, I think I used an insane amount of steps and images, but when I trained this (one week ago) I had no idea what I was exactly doing.

jaggy92500.ckpt [93423a00]

Game screenshots.

> Here are the terms to call: jaggy, then ps_game_screenshot, pc_game_screenshot, gamecube_game_screenshot, blood_and_gore, intense_violence, zotov_game_screenshot, eroge_game_screenshot, life_sim_game_screenshot, and/or alter_echo. This is in descending order of influence. There are a few others which are not effective enough to name, but can have strong effects at times. I won't mention them. You should put (cartoon) and maybe (menu) in the negative prompt.
